

Accelerate Global Clinical Trial Delivery with High Performing, Supported Sites

Efficient, supported, and patient-centered clinical trial operations

80+

Participating Medical Institutions

250+

Engaged Investigators

20+

Countries

Therapeutic Experience

- **Cardiology & Vascular Diseases**
- **Endocrinology & Metabolic Diseases**
- **Gastroenterology**
- **Hematology & Oncology**
- **Medical Devices**
- **Nephrology & Urology**
- **Neurology**
- **Respiratory & ENT**
- **Rheumatology & Musculoskeletal Diseases**

Milestone One connects sponsors to a global network of more than 80 medical institutions across 20+ countries with more than 250 engaged investigators across key therapeutic indications.

Investigators in the network are enthusiastic about research, work with patient populations that are eligible and interested in clinical trial participation, and are supported by on-site research coordination support services that strengthen study execution and data quality.

This combination of scale, motivated investigators, strong patient access, and structured administrative and operational support helps sponsors achieve reliable enrollment and consistent, high quality study delivery across diverse regions and indications.

What Sponsors Gain

Milestone One helps sponsors access a more reliable foundation for every study. By providing dedicated research coordination support services at the point of care, we help sites stay organized, responsive, and focused on patients and protocol aligned decisions. The result is measurable improvement across key areas of site performance:

MORE PREDICTABLE SITE STARTUP

Prepared, supported sites move from selection to activation more smoothly, which helps sponsors achieve first patient in timelines with greater confidence.

STRONGER AND MORE CONSISTENT ENROLLMENT

Milestone One works with motivated sites that have enrollment capacity. By supporting visit scheduling, follow up, and documentation, we help investigators focus their time on patients and protocol aligned decisions, which supports reliable recruitment and retention.

GREATER CONFIDENCE IN SITE PERFORMANCE

Sponsors gain access to sites that operate with site-level coordination support services, clear workflows, and experienced research expertise at the point of care. This helps support protocol adherence, consistent execution, and fewer operational surprises during the study. As a result, projects move more efficiently toward close-out, ensuring timely, high-quality data availability for statistical analysis and enabling shorter overall study closure timelines.

How Milestone One Works

Milestone One reinforces site readiness by providing administrative and operational support services that strengthen research coordination within clinical practices.

At participating sites, a Milestone One research coordinator supports the daily conduct of clinical trials by arranging and supporting patient visits, documentation, scheduling, and regulatory workflows, while investigators retain responsibility for medical care and study decisions.

Our site enablement support includes:

- Coordination of patient visits, scheduling, and day to day trial activities
- Support for documentation, regulatory workflows, and site logistics
- Investigator engagement, site readiness activities, patient recruitment support, and access to experienced research expertise

Through this framework, Milestone One provides experienced research coordination and reduces administrative burden at the site level, which supports protocol adherence and consistent study delivery for sponsors.

Milestone One works with motivated investigators who have access to high volumes of patients in relevant indications and who are committed to clinical research. The network includes both newly research enabled and experienced institutions that are supported by the same coordination infrastructure, so sponsors can access sites that are prepared to execute.

How Milestone One Is Different

Unlike traditional site networks or site management organizations, Milestone One reinforces research readiness within existing clinical practices by providing administrative and operational support through on-site coordination infrastructure, rather than replacing the site's own leadership.

This framework enables motivated physicians with strong patient access to participate in trials while maintaining full medical and study oversight. Sponsors gain access to research-ready sites where highly motivated investigative teams, high-enrolling patient populations, and structured coordination support built on standardized research workflows come together to drive predictable study delivery.

Milestone One provides access to research-ready clinical sites supported by robust administrative and operational infrastructure, freeing investigators from routine coordination tasks and creating the capacity to focus on patient care and enroll more patients.

Explore Whether Milestone One Sites Are A Fit For Your Study

If you're looking for **research ready sites with reliable enrollment capacity** and structured coordination support, Milestone One can help you:

- Expand into motivated community and health system sites
- Improve site activation timelines
- Strengthen enrollment performance and protocol adherence

Share a few details about your upcoming trial and indication focus, and our team will follow up with site availability, country coverage, and relevant therapeutic experience.
